SUBJECTS

Use of the Index

This index is designed to reveal subjects and their interrelations. Thus, an entry, "Anxiety, youth, problem drinking," indicates an item dealing with the interrelationship of the three possibly independent topics, or of any two with the third. And an entry, "Delinquency, drinking, antisocial behavior," may reveal how delinquency, drinking is affected by antisocial behavior or how antisocial behavior affects delinquency, drinking.

Terms

Generally, indexing is as specific as possible without posting to broader terms. Many relationships to certain very frequent terms are not indexed under those terms, but appear as main entries throughout the index; scope notes at those terms (e.g., at "Alcoholism," "Drinkers, drinking") are a guide to the index terms used. Preference has been given to direct rather than to inverted entries (e.g., "Prevalence of problem drinking" rather than "Problem drinking/prevalence"). Information not found one way would be sought the other way or under all possible synonyms. Certain index entries with multiple subdivisions are dealt with by successive main entries, such as "Accidents/fatal," "Accidents/traffic." Similarly, see "Acetate/blood," "Acetate/endogenous," etc., rather than "Blood acetate," "Endogenous acetate," etc.
